A construction site for the MARTA 2040 project. In the foreground, a large white truck with a crane is lifting a long metal beam. The crane is a CANAL brand. The truck has "RAILWORKS" and "USDOT 261104" written on it. In the background, several workers in high-visibility vests and hard hats are working on the tracks. There are green barrels and other construction materials scattered around. A yellow diamond-shaped sign on the right reads "END OF NO WALKING CLEARANCE WITH MOVING TRAINS". The scene is set outdoors with trees in the background.

VISUALIZING ACCESS

Access from a particular spot in Norfolk, VA

The number of jobs reachable is a measure of access.

	in 30 minutes	in 45 minutes	in 60 minutes
Population Accessible	40,070	69,280	109,860
Jobs Accessible	26,670	47,190	91,130

Estimates based on 2015 TAZ population and jobs data

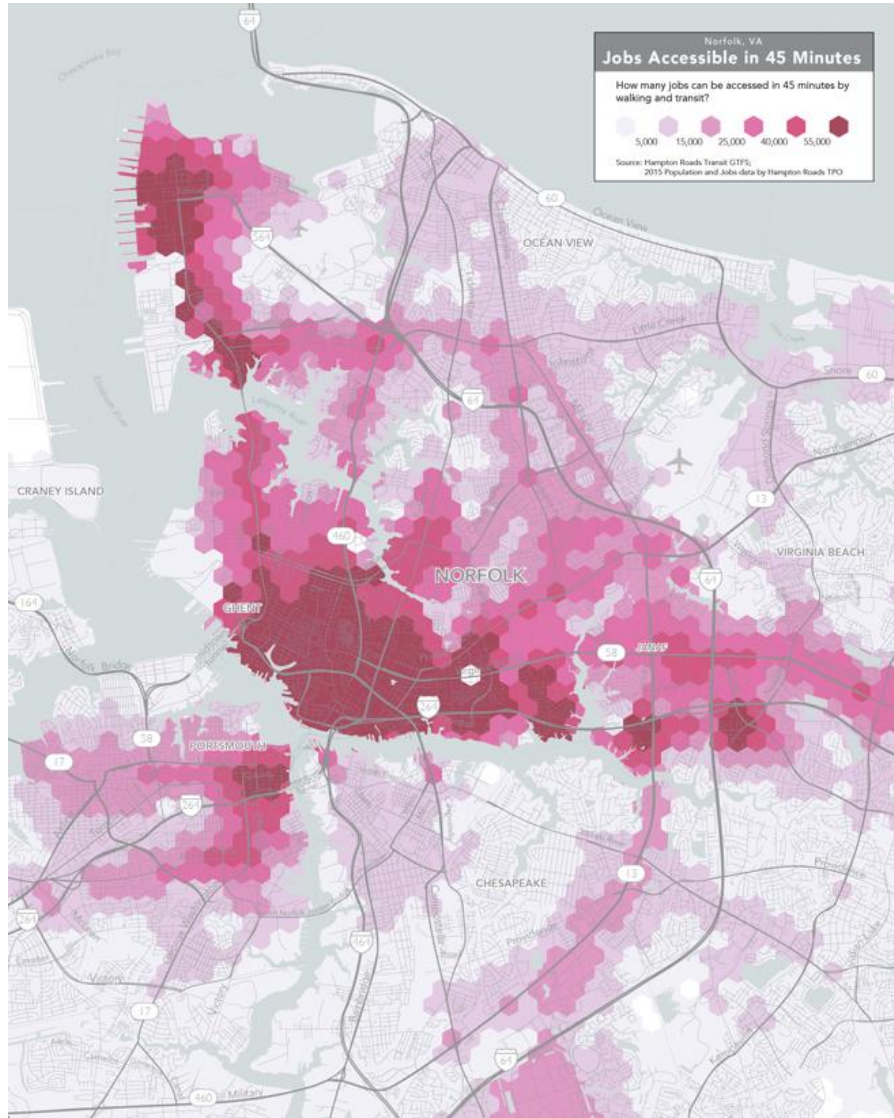

WHAT IS ACCESS?

Her **access to jobs** is the **number of jobs** in that area.

You can also look at **access to education, shopping, etc.**

ACCESS ACROSS AN AREA

Each point is colored by the number of jobs reachable from there.

Now we can say:
The average Norfolk resident can reach 30,000 jobs in 45 minutes.

Can we grow that number? *Should we?*

ACCESS IS HOW NETWORK DESIGN AFFECTS RIDERSHIP

- ✓ When a transit network maximizes access, it increases the likelihood that the service is useful for any particular trip.
- ✓ Maximizing access by transit also improves:
 - ✓ Access to economic opportunity.
 - ✓ Personal freedom.
 - ✓ Value of investments in a walkable community.
 - ✓ Functionality of the city.

HOW TRANSIT EXPANDS ACCESS

The most efficient access-expanding service is

- **Frequent**
- Reasonably fast and reliable.
- Available when you need it (span of service)

...and **focused where there are many people and activities that can benefit.**

DENSITY

DENSITY *How many people, jobs, and activities are near each potential transit stop?*

WALKABILITY

WALKABILITY *Is it possible to walk between the stop and the activities around it?*

+ It must also be safe to cross the street at a stop. You usually need the stops on both sides for two-way travel!

DIFFERENT GOALS, DIFFERENT SERVICE

Imagine you had 18 buses to serve this fictional town.

Dots are the locations of residents and jobs

RIDERSHIP GOAL

The Ridership Goal

Maximum access for the greatest possible number of people

But:

- *not available for everyone*
- *not necessarily available to all the people who need it most.*

COVERAGE GOAL

The Coverage Goal

Some service near everyone, a baseline level of access everywhere.

But it's unlikely to be useful for many people and trips.

WHY BOTH GOALS MATTER

Ridership Goal

- Maximum average access to opportunity.
- Lowest subsidy per passenger.
- Support dense and walkable development.
- Emissions reduction.
- Reduction in vehicle miles traveled.

Coverage Goal

- Some service near every home and job.
- Baseline level of access available everywhere.
- Service to every member city or electoral district.

THE TRADEOFFS ARE UNAVOIDABLE

But you CAN choose a deliberate balance point on the spectrum. ("Devote ___% of our resources to the ridership goal and ___% to the coverage goal.")

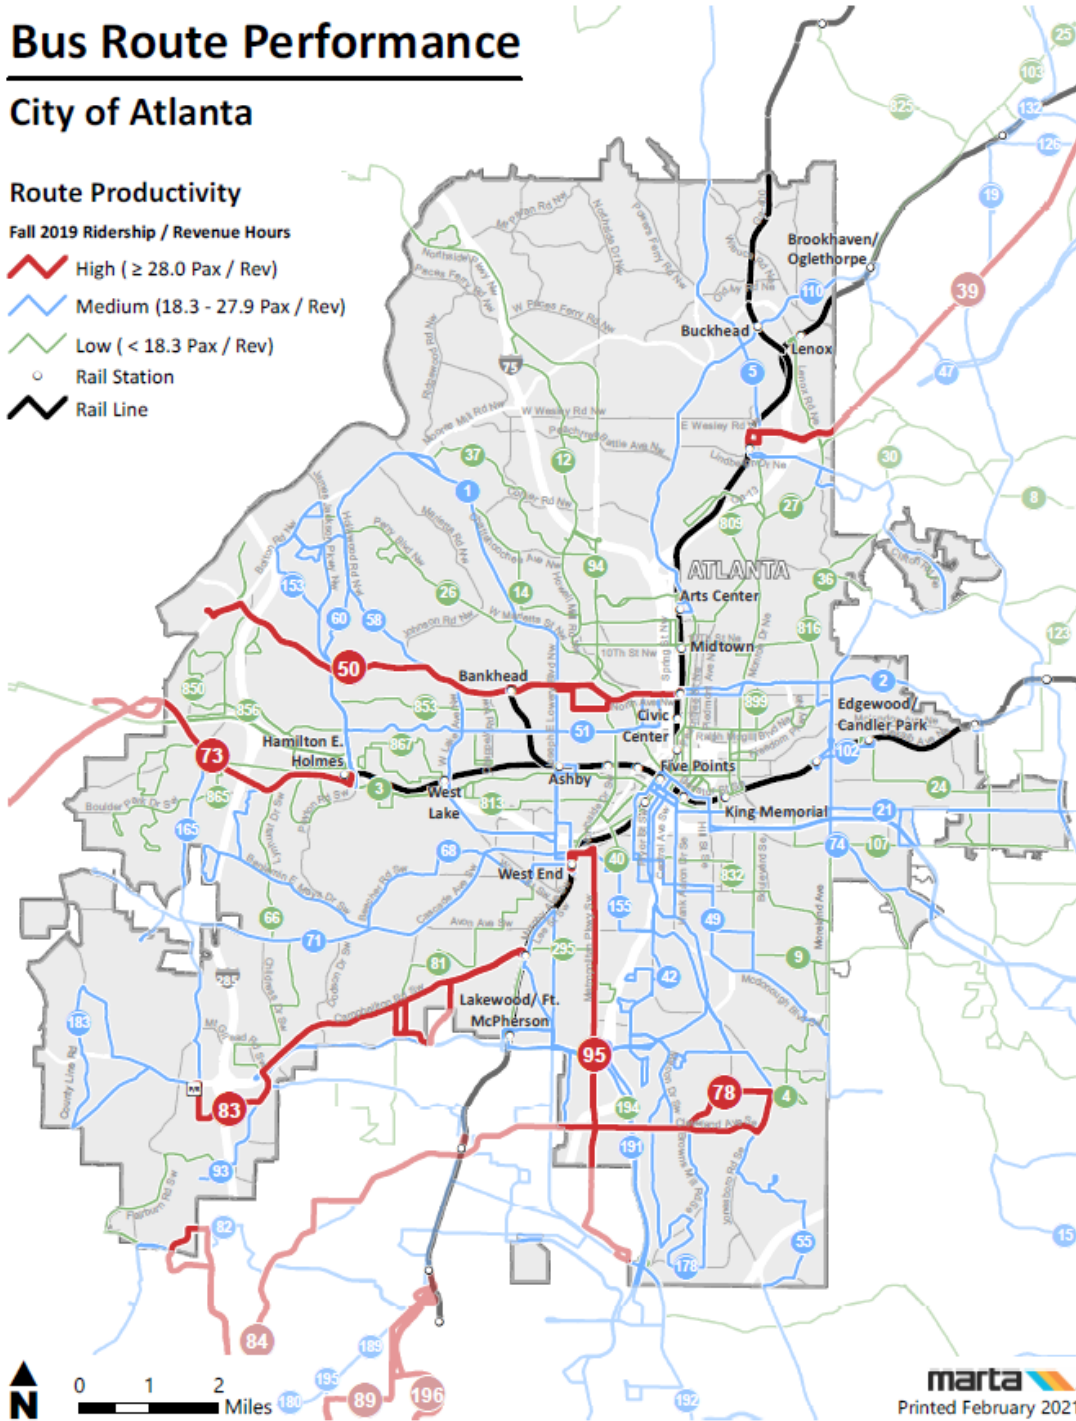

Bus Route Performance

City of Atlanta

Route Productivity

Fall 2019 Ridership / Revenue Hours

- High (≥ 28.0 Pax / Rev)
- Medium (18.3 - 27.9 Pax / Rev)
- Low (< 18.3 Pax / Rev)
- Rail Station
- Rail Line

TIMELINE

Public Engagement

A photograph of a subway station platform with a blurred train in motion. The platform has a wooden wall with colorful abstract art. A sign above the train reads "Midtown N4". Several people are visible on the platform, including a person with a wheelchair on the left and a person with a backpack on the right. The text "THANK YOU" is overlaid in large white letters across the center of the image.

THANK YOU
